

Accurate and comprehensive description of the contribution. Demonstrates clearly what's working, what's not working, achievement, issues, and challenges during each iteration. 2 points

(Israel Whakamoe) As a team we work very well, we see the work that needs to be done and we designate work evenly between the group members. This has created nothing that has not worked yet and we all work well as a team. We have created customer personas, stakeholder registers, and group logos, and discussed our weekly report together. All members have contributed evenly. Each week we come together and discuss what needs to be done if anything needs to be done. I was away last week so something I could do better is, do some extra study to catch up to anything my teammates have pushed ahead on. We have not come across any challenges so far as everything we do works smoothly.

(Roman Seaton) We are a good team, we click, work together well, and start every assessment by assigning roles and doing our best to fill them- through this method, we can quickly accomplish tasks and keep an up-to-date record of what tasks need completion. As team member, it has been my role to make/organise docs, keep records/screenshots of our work, and help assign jobs: Brent has been great at making weekly reports, Rajib was super helpful in writing personas, and Israel gets stuff done fast. So far we've worked in harmony, and as it is quite early on, have not encountered any problems, issues, or challenges during the iteration phases.

*stakeholder register

*personas/paradigm models

*made weekly reports

*chose a project model for a business

Brent Bragancia

In the persona report, I used AI, specifically Deepseek, a Chinese AI model, which generates content for a persona like our customers.

GOALS AND MOTIVATIONS

CHALLENGES AND OBSTACLES

1. Stay Active & Independent 🏃

Walk at least 5,000 steps a day to keep his joints moving.

Maintain his daily morning stretch routine to avoid stiffness.

Stay out of a wheelchair for as long as possible—prides himself on being mobile.

2. Build & Maintain Social Connections 🧑🧑

Make new friends at the retirement home to avoid

1. Physical Health Limitations 🏠

Chronic Knee Pain: Struggles with arthritis, making it harder to walk long distances.

Hearing Loss: Needs hearing aids but refuses to wear them because "they make me look old."

Doctor's Orders: Constantly told to cut back on salt, sugar, and beer—his favorite things.

Medication Overload: Has a long list of daily pills but sometimes forgets to take them.

This is my evidence of work shared with the stakeholder registrar all of us contributed with the names and their requirements for people in our company.

Group meeting note-taking

Registrar requirements, everyone on the team helped with the group project and contributed evenly and group work became easier for our project.

There is nothing of note that is not working with the group well, we communicate with each other work together, and tackle the task at hand with a bit of fun on each other's end

Rajib Chowdhury

Something the group and I invested quite a bit of time into was the creation of “Customer Personas”. We took on this task by using a plethora of different AI models to design our fictional Customer personas. We primarily worked with Microsoft’s Co-Pilot & DeepSeek to develop both the descriptions and details about the users, alongside an AI-generated image of the individual.

Group Collaboration. This is an example of something that is currently working very well, everybody in our team works together in harmony. Each team member fulfills their duties and purposes appropriately.

In regards to things which are not working. I can’t think of much, since everything seems to be flowy quite smoothly.

Again, since we haven’t encountered any potentially big issues in regards to our team work believe there isn’t much to improve on.
